

FCAA DATA SPOTLIGHT

HIV PHILANTHROPY FOR CHILDREN & YOUTH

Distilled from FCAA's annual resource tracking report, Philanthropic Support to Address HIV/AIDS in 2014, the following data offers an important new benchmark: the first analysis of HIV-related philanthropy for children and youth. This information focuses on HIV funding data targeting children (0-14), youth (15-24), orphans and vulnerable children. Also included are pregnant women/mothers and babies who are the recipients of resources intended to address the elimination of mother-to-child-transmission (EMTCT).

Ending AIDS among these vulnerable populations is a critical milestone on the path to defeating it altogether. However, accomplishing this task will require significant and sustained funding. Based on our findings, there is a gap between the needs of children and adolescents and the available resources directed toward them. Without addressing this gap, we risk rolling back the gains made to date.

THE NEED

Children and adolescents continue to be at significant risk:

600

children are newly infected with HIV each day

2.6M

children are living with HIV or AIDS

80%

of children with AIDS die before their 5th birthday

but only **1/4** have access to treatment

AIDS is the leading cause of death among adolescents in Africa

and the second leading cause of death among adolescents globally

Young women & mothers must have access to HIV prevention & treatment services in order to keep themselves and their children healthy:

1.2M

HIV+ women give birth each year.

3X

Mother-to-child transmission of HIV increases 3X by the end of breastfeeding

IN 2014:

\$115.6M

in HIV-related philanthropy addressed these vulnerable populations

18%

of total private HIV funding
