

# FCAA DATA SPOTLIGHT

## UK PHILANTHROPY FOR HIV & AIDS

According to the recent Kaiser Family Foundation and UNAIDS<sup>1</sup> report, the United Kingdom (UK) is the second largest government donor in the global HIV response. However, despite an increased pledge to the Global Fund,<sup>2</sup> cuts to the UK's bilateral country programs means that overall funding for HIV from the UK is falling. This trend is replicated globally with donor funding for HIV decreased by 7% from 2015 to 2016.

In the context of these negative trends, encouraging continued UK government leadership in the global HIV response is essential. But so is recognizing the contribution of all other UK stakeholders - including private foundations. Philanthropy plays a key role in supporting people living with or affected by HIV, as well as in leveraging continued financial, political and programmatic prioritization of HIV from the UK government.

This data distilled from FCAA's annual resource tracking report *Philanthropic Support to Address HIV/AIDS in 2015*.

### IN 2015, THE UK PRIVATE PHILANTHROPIC SECTOR CONTRIBUTED:

**\*\* £71,070,231**  
in HIV-related philanthropy  
(\$94,620,541)

<sup>2</sup> UK pledges £1.1bn to global aid fund against Aids, TB and malaria. The Guardian.

\* Funders with an \* have headquarters in both the US and the UK, and thus their full amount of funding for 2015 was included in this analysis

\*\* This analysis uses the GBP conversion rate 1.3313667325 as published on September 12, 2016. This is the same currency rate used for the source publication: *Philanthropic Support to Address HIV/AIDS in 2015*.

## GEOGRAPHIC DISTRIBUTION OF FUNDING

### GLOBAL DISTRIBUTION

## FUNDING DISTRIBUTION BY TOP 15 POPULATIONS

### LOW- AND MIDDLE-INCOME COUNTRIES RECEIVED

## WHY IS THIS IMPORTANT?

Within its analyses FCAA includes a focus on funding by country-level income as well as support for key populations. Why?

- It is estimated that **middle-income countries** will be home to **70% of people living with HIV/AIDS** by 2020.
- Recent UNAIDS data shows that close to **half of all new HIV infections globally occur within key populations**, including sex workers, people who inject drugs, transgender people, and gay men and other men who have sex with men (MSM).

Philanthropy remains often the largest, if not only, source of funding for underfunded geographies and populations.

## INTENDED USE OF FUNDING
