

FCAA DATA SPOTLIGHT

HIV PHILANTHROPY FOR OLDER ADULTS

By 2020, 70% of people living with HIV in the U.S. will be 50 and older. What are the needs of this population, and is the HIV-related philanthropic sector keeping pace? In commemoration of National HIV/AIDS and Aging Awareness Day (#NHAAAD), FCAA is pleased to share the first analysis of HIV-related philanthropy for older adults (50+).

This data is distilled from FCAA's annual resource tracking report, Philanthropic Support to Address HIV/AIDS in 2015. FCAA also references data from these recommended stakeholders: ACRIA, the National Resource Center on LGBT Aging, Diverse Elders Coalition, and SAGE (Advocacy & Services for LGBT Elders).

IN 2015:

\$4,957,125

in HIV-related philanthropy addressed the needs of older adults (50+) living with HIV/AIDS.

REPRESENTING:

WHY IS THIS IMPORTANT?

Among adults 50 and older:

African Americans = 12x **Latinxs = 5x**
more likely than white older adults to have HIV.

Among older women,
African American women
constitute

of new HIV infections .

and, In 2010,

of new HIV infections among
older adults were among MSM.

Yet these vulnerable populations were not made a funding priority.

WHY IS THIS IMPORTANT?

According to the CDC, older adults accounted for:

of new HIV infections .

YET ONLY

of HIV philanthropy for older
adults supported prevention.

Due to general stigma of HIV, as well as the fact that older adults are often not perceived as an at-risk population – by healthcare providers as well as themselves – they are often dual diagnosed for HIV and AIDS by the time they are tested.

Further, older adults often have more than two chronic conditions. An ACRIA study found the most common comorbidities among HIV positive older adults included: depression, arthritis, hepatitis, neuropathy and hypertension. This can have significant impact on how they manage HIV, underscoring how critical community and social support services are for older adults living with HIV.
